ON-CHAIN INVESTIGATION · SOLANA, ETHEREUM

Rollbit and RLB

Token supply, team-linked selling and casino-funded influencers

Period covered
Nov 2021 – Mar 2025

Prepared by
Ritik Jain, CCAI · CCI · CALM

$1.43M
sold from a team-linked wallet

59.6%
of circulating RLB held by Rollbit wallets

350.9 ETH
sent to a streamer 5 min before he went live

15+
wallets mapped around one streamer

Public sample of client work. Private individuals' names are withheld and wallet addresses are shortened.

1. Executive summary

Rollbit is a crypto casino with its own token, RLB. The client asked three questions. Is RLB's claimed "fully circulating" supply real? Did team-controlled wallets sell into the market? Were the influencers promoting Rollbit betting their own money? I traced RLB from its 2021 mint on Solana through its 2023 move to Ethereum, and mapped the wallets around three promoters.

FINDING	EVIDENCE	CONFIDENCE
A wallet that received 50M RLB three days after launch sat dormant for over a year. It was activated with gas from Rollbit's own wallets, then sold everything for $1.43M USDT.	Gas-funding and trade records	Deterministic
On Ethereum, Rollbit-controlled wallets hold 59.6% of the ~2.1B RLB counted as circulating. Only ~1.2% sits in the main trading pool.	Holder balances, pool depth	Deterministic
A streamer's "personal" deposits came from Rollbit's hot wallet minutes before his streams, then went straight back to the casino.	Transfer timing	Deterministic
Rollbit's ETH hot wallets held ~$10M while ~$90M had been sent to two exchange deposit addresses.	Balances and outflows	Deterministic
Two other promoters traded RLB around their own promotional posts, including one who sold 2M RLB in under 30 minutes while posting bullish content.	Trade timing vs posts	Probabilistic

> **Bottom line: the "fully circulating" claim does not match on-chain holdings, a team-linked wallet sold $1.43M of RLB, and at least one high-profile streamer was betting with casino money presented as his own.**

2. Scope and method

- Chains: Solana (RLB 2021–2024) and Ethereum (RLB from June 2023; ETH used by promoters).
- Sources: block explorers (Solscan, Etherscan), Arkham entity labels and tracer, DEX trade data, archived social posts, Rollbit's published terms and announcements.
- Approach: rebuild the token's wallet structure from the mint, follow gas funding to link dormant wallets, reconcile supply and burns, then match promoter posts and stream times against transfers.
- Every finding is tagged with a confidence level (key at the end of this report).

3. Background: RLB

ITEM	DETAIL
Token launch	Announced 10 Nov 2021 on Solana; 5B total supply
Solana contract	RLBx...pL7a
Stated tokenomics	22.865% airdrops, 77.135% reserved for stakers

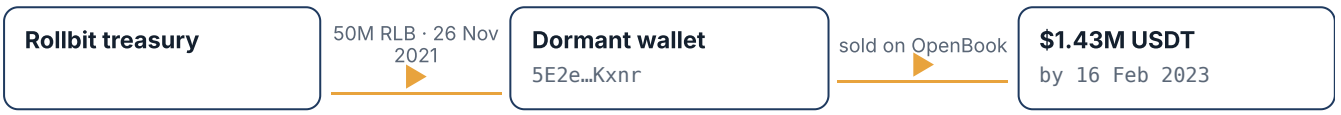

RLB Lottery	From 25 Nov 2021; 0.1% staking fee per entry, half burned
Move to Ethereum	From 28 Jun 2023; Solana RLB void after 1 May 2024
Ethereum contract	0x046e...3f3d (deployer 0x772D...6aF0), 5B supply
Promised disclosure	Full supply breakdown promised for 1 May 2024; not published

4. Part A: The Solana mint and the dormant wallet

I rebuilt the wallet structure from the first mint. Five wallets matter: the deployer, Rollbit's RLB deposit wallet, the airdrop wallet, the liquidity wallet, and a fifth wallet that received 50M RLB three days after launch.

ROLE	ADDRESS
Deployer	`RLB7…GKXH`
RLB deposit wallet	`AAbc…AEp4`
Airdrop wallet	`6rF9…p6pF`
Liquidity wallet	`HPpN…qoad`
Dormant (dump) wallet	`5E2e…Kxnr`

23 Nov 2021	5B RLB minted by the deployer in 5 transactions.
23 Nov 2021	9M RLB to the airdrop wallet. 4.8B RLB to the treasury, and 96.4% of that moved to one centralized hot wallet.
—	9M RLB and 100 SOL sent from the treasury to the liquidity wallet to seed a Raydium pool.
26 Nov 2021	50M RLB sent to the fifth wallet. No explanation given.
17 Nov 2022	Liquidity wallet removes 3M RLB and 7,661 USDT from the pool.
Jan 2023	The dormant wallet is woken up with gas: 0.1 SOL from the deployer and 1.51 SOL from Rollbit's RLB deposit wallet.
Jan–Feb 2023	Dormant wallet sells its 50M RLB on OpenBook. Sales complete by 16 Feb 2023 for $1.43M USDT; $300K is later converted into 13,000 SOL.
by 8 Aug 2023	Liquidity wallet sells RLB on Orca, cashing out 13 SOL and 1.74M USDC.
1 May 2024	Deployer sends its remaining 100M RLB to the deposit address for burning.

The link that matters: the gas that woke this wallet came from the deployer and from the same deposit wallet that receives user deposits. Without that, the wallet could pass as an ordinary holder.

FINDING	EVIDENCE	CONFIDENCE

The dormant wallet is linked to Rollbit through gas funding from two Rollbit wallets.	Gas transfers	Deterministic
It sold 50M RLB for $1.43M USDT.	OpenBook trade history	Deterministic
About 4.8B RLB (96% of supply) was burned on Solana, and the burns came from team-held supply rather than from returned user tokens.	Burn transactions	Probabilistic

5. Part B: Supply on Ethereum

After the migration, the team said 100% of RLB is circulating. I compared that with wallet balances.

HOLDER	RLB	SHARE OF 5B SUPPLY
Deployer wallet	1.1B	22%
Rollbit hot wallet + Rollbot	161M	3.2%
Burned	2.9B	57%
Counted as circulating	~2.1B	of which 59.6% sits in Rollbit wallets

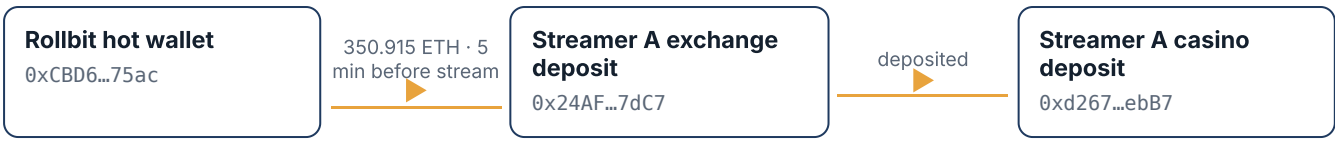

- Only ~1.2% of supply is in the main Uniswap RLB/USDC pool. At a ~$137M market cap, a $500K sale would move the price ~13%.
- Jan–Nov 2024: 895,790,342 RLB burned, and 895,678,991 RLB sent to the hot wallet in the same period. The two figures almost match.
- 28 Jun 2023: 1.2M RLB moved through rollbit.eth and the Rollbot deposit address into the ERC-20 hot wallet, which looks like an internal wallet.
- From 15 Mar 2025, a new wallet funded with 0.01 ETH by the hot wallet received 4M+ RLB, swapped it to USDT, and used part of it to buy and deposit another casino token (SHFL).

FINDING	EVIDENCE	CONFIDENCE
Rollbit-controlled wallets hold 59.6% of RLB counted as circulating.	Holder balances	Deterministic
2024 burns are almost exactly matched by RLB sent to the hot wallet.	Transfer totals	Deterministic
The 2025 wallet's pattern suggests internal distribution or wash trading.	Wallet behaviour	Heuristic
No updated tokenomics or migration totals were published.	Public posts	Reported

6. Part C: Casino-funded promoters

Streamer A: casino money presented as personal funds

Streamer A told his audience he bought ETH himself to gamble on Rollbit, and in 2021 published a wallet "for transparency". I mapped 15+ wallets around him, including exchange and casino deposit addresses.

Event 1, 21 Dec 2021: he returned from a three-month break showing a ~$1M Rollbit balance, five minutes after this transfer.

21 Dec 2021	Rollbit hot wallet sends 350.915 ETH to Streamer A's exchange deposit address. Five minutes later he goes live with a ~$1M balance.
21 Jun	Rollbit sends 86.9 ETH to the same exchange address. 27 minutes later he posts that he personally bought ~$170K of ETH. The ETH is then deposited back to Rollbit.

Rollbit says its hot wallets only handle user deposits and withdrawals. But the hot wallets held only about 1% of user deposits, while ~$90M of ETH had been sent to two of Rollbit's exchange deposit addresses, and most of it never came back. That outflow is a likely source of promoter funding.

FINDING	EVIDENCE	CONFIDENCE
Both events show casino ETH arriving shortly before Streamer A's "personal" deposits or streams.	Transfer timing	Deterministic
The pattern is consistent with sponsored play money presented as personal funds.	Repeated pattern	Heuristic
Hot wallets held ~$10M of ETH against ~$90M sent to exchange deposit addresses.	Balances and outflows	Deterministic

Influencer B: buy, deposit, withdraw, sell

Influencer B (280K followers) partnered with Rollbit from late 2022. On 1 Apr 2023 another account publicly accused him of selling ~45M RLB (~$3M at peak) while promoting it; the post was later deleted but archived. I mapped the wallets involved.

WALLET	ROLE
`5UqX…Cnrj`	Buys RLB, matching his posted purchases
`RBrm…B8yw`	His personal Rollbit deposit address
`Fwaw…d9iH`	Receives withdrawn RLB and sells it
`Cztr…HFUe`	Linked wallet

- 7 Feb 2023: a previously inactive wallet tied to him received 2,571 SOL from Rollbit's treasury and used it to buy RLB.
- At least 9 transfers (30,000 SOL) went from the selling wallet back to his personal deposit address. Only the account owner would use that address, which ties the selling wallet to him.
- Proceeds from RLB sales were sent straight back to Rollbit's main deposit wallet.

FINDING	EVIDENCE	CONFIDENCE
Buying and selling wallets belong to the same person.	Deposit-address reuse	Probabilistic

Treasury SOL funded at least one of his RLB buys.	Transfer record	Deterministic
~45M RLB sold while promoting.	Public allegation	Reported

Promoter C: bought before announcing, sold while promoting

13 Jul 2023	Moves $200K USDC across four linked wallets, ending at Rollbit.
16 Jul 2023	Buys ~$200K of RLB, two days before announcing a Rollbit partnership.
18 Jul 2023	Announces the partnership and starts posting about Rollbit.
About a week later	Receives 2M RLB and sells it in chunks in under 30 minutes while still posting bullish content.
Following days	Buys again minutes after a promotional post, sells three days later; later RLB is sent back to Rollbit's hot wallet.

FINDING	EVIDENCE	CONFIDENCE
Trades repeatedly lined up with his own promotional posts.	Trade timing vs posts	Probabilistic

7. Part D: Platform conduct

- Rollbit's terms (Section 4) require KYC before betting. A player from Australia, a restricted country, signed up in Feb 2023 with a bonus and no KYC. After large wins the casino froze part of his balance and sued him. In Mar 2025 a US court rejected Rollbit's subpoena to Kraken as overbroad.
- 5 May 2023: a Rollbit moderator said on Discord that users may run multiple accounts.
- Aug 2023: Rollbit launched an unlicensed token exchange ("Degen Exchange") and closed it within a month.
- Rollbit's operator is reported to share roots with an earlier gambling site that closed after withdrawal complaints.

FINDING	EVIDENCE	CONFIDENCE
These points come from court records, public statements and community reports, not from on-chain data.	Court filings, Discord, public posts	Reported

8. Limitations

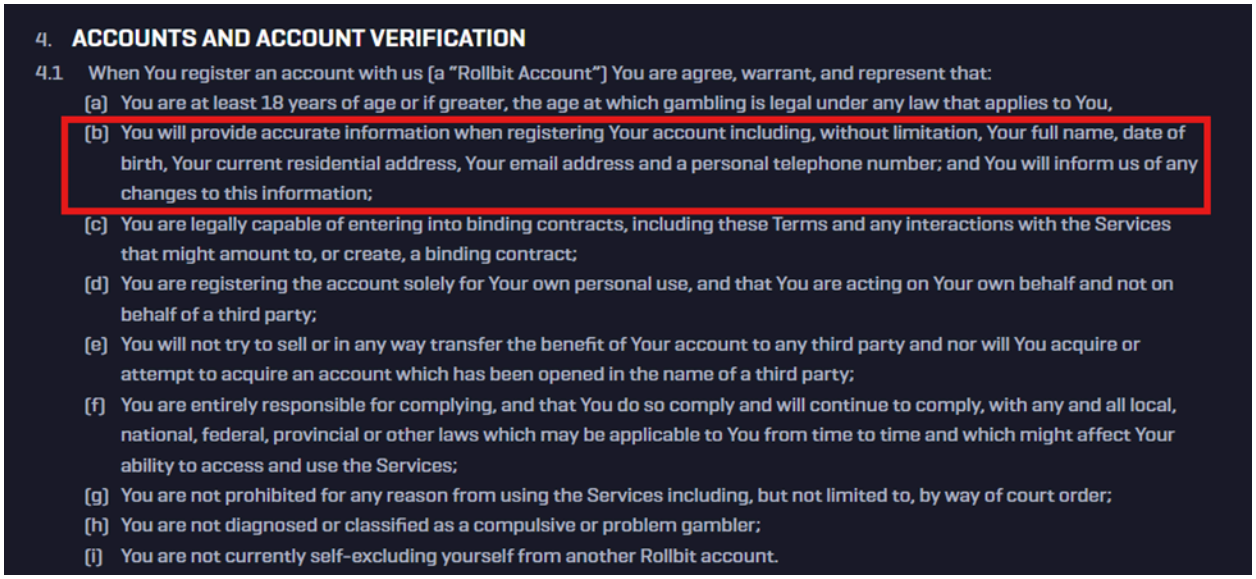

- Attribution of promoter wallets relies on deposit-address reuse and matching posts; it is strong but not a legal identification.
- USD values use prices at the time of each transfer or sale as shown by the explorer.
- Off-chain agreements between Rollbit and promoters were not available; sponsorship is inferred from fund flows.

Confidence key

Deterministic	Directly visible on-chain or in a primary record. Anyone can verify it.
Probabilistic	Strong attribution from several linked pieces of evidence.
Heuristic	An inference from a repeated pattern. Treat as a lead, not a fact.
Reported	From a third party: an audit, a court filing, a public statement or user complaints.

About this sample. This is a public, redacted version of client work by INVESTIGATAH. Names of private individuals and promoters are withheld, and wallet addresses are shortened. The client version includes full addresses, transaction hashes and the screenshot evidence behind every finding.

KYC on Demand: Rollbit's Tale of Selective Compliance

4. **ACCOUNTS AND ACCOUNT VERIFICATION**

4.1 When You register an account with us (a "Rollbit Account") You are agree, warrant, and represent that:

(a) You are at least 18 years of age or if greater, the age at which gambling is legal under any law that applies to You,

(b) You will provide accurate information when registering Your account including, without limitation, Your full name, date of birth, Your current residential address, Your email address and a personal telephone number; and You will inform us of any changes to this information;

(c) You are legally capable of entering into binding contracts, including these Terms and any interactions with the Services that might amount to, or create, a binding contract;

(d) You are registering the account solely for Your own personal use, and that You are acting on Your own behalf and not on behalf of a third party;

(e) You will not try to sell or in any way transfer the benefit of Your account to any third party and nor will You acquire or attempt to acquire an account which has been opened in the name of a third party;

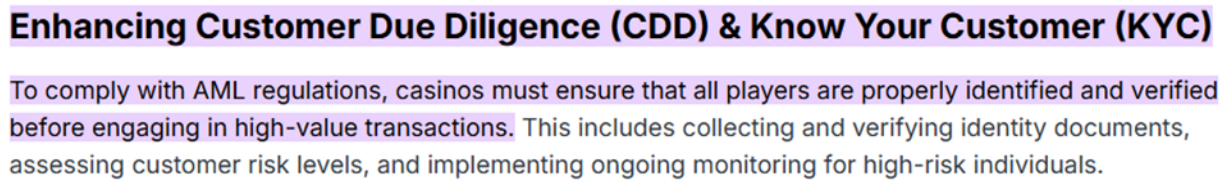

(f) You are entirely responsible for complying, and that You do so comply and will continue to comply, with any and all local, national, federal, provincial or other laws which may be applicable to You from time to time and which might affect Your ability to access and use the Services;

(g) You are not prohibited for any reason from using the Services including, but not limited to, by way of court order;

(h) You are not diagnosed or classified as a compulsive or problem gambler;

(i) You are not currently self-excluding yourself from another Rollbit account.

Rollbit's Terms & Conditions are crystal-clear in Section 4 ("Accounts and Account Verification"): every new user must provide their full details in compliance with KYC/AML laws before wagering.

Enhancing Customer Due Diligence (CDD) & Know Your Customer (KYC)

To comply with AML regulations, casinos must ensure that all players are properly identified and verified before engaging in high-value transactions. This includes collecting and verifying identity documents, assessing customer risk levels, and implementing ongoing monitoring for high-risk individuals.

Yet, in James Hopkins's case, the platform flagrantly ignored this rule, sending him a bonus invitation and allowing him to deposit and play without ever verifying his identity. Under most gambling regulations, bypassing KYC is strictly forbidden because it opens the door to money laundering and exposes players to unfair treatment. By selectively enforcing its own rules—waiving KYC hurdles for Hopkins while later invoking them to freeze or seize funds after big wins—Rollbit demonstrates a willingness to bend the very regulations it claims to uphold, all in the name of boosting its bottom line.

> In February 2023, Bull Gaming contacted Hopkins and offered him a $1,310 bonus for opening an account on the Rollbit platform. ECF No. 15-4 (Hopkins Decl.) ¶ 4. Hopkins, who attests to being a "known poker player" who has "participated in several professional tournaments," agreed, opening an account with Rollbit on February 16, 2023 under the name "Stake Stinks[.]" *Id.* ¶¶ 6, 8. He attests that Rollbit instructed him to "simply….create a Rollbit account with the email address you've received this email on" and did not require him to submit any KYC information beyond his email address. *Id.* ¶¶ 4, 7. Between February 2023 and April 2024, Hopkins "accumulated approximately $70,000,000 of winnings[.]" *Id.* ¶ 19. Rollbit paid him approximately $50,000,000, but, Hopkins attests, "has not yet" paid the remaining $19,644,529.31. *Id.* ¶¶ 16, 20.

On top of that, there's another layer to Hopkins's story that speaks to how far Rollbit was willing to stretch its own rules: he resides in Brisbane, Australia—a jurisdiction explicitly barred from accessing the site. Yet when Hopkins signed up, not only did Rollbit waive its KYC requirement, it also turned a blind eye to his location. But the second he started winning, everything changed: the bouncer appeared, the door slammed shut, and Rollbit suddenly remembered all those "must-verify" rules they'd ignored.

When James Hopkins signed up in February 2023, there's no record he ever saw—or clicked to accept—Rollbit's Terms & Conditions. In fact, Rollbit's own paperwork shows they didn't even start requiring new users to agree to those rules until September 2024.

They later tried to say "Well, here's our August 2023 policy!"—but that document didn't exist when Hopkins joined, and he never got told about it. In short, Rollbit can't point to any moment in early 2023 when Hopkins knowingly agreed to their contract, so the whole foundation of "you accepted our rules" simply falls apart.

United States District Court
Northern District of California

defendant." ECF No. 36-3 at 8. Despite having ample opportunities to demonstrate that Hopkins entered into a contract with Bull Gaming, Bull Gaming has not credibly done so. While Victoria Brown attests that new users are required to check a box confirming that they read and accepted Bull Gaming's Terms and Conditions, her declaration and the attached exhibit show that this procedure was in place in September 2024, after Hopkins first opened his account in February 2023. ECF No. 37-2 ¶ 6. This evidence is of limited probative value in showing that a similar procedure existing in February 2023 when Hopkins first opened his account. Similarly, Bull Gaming provided a copy of its Terms and Conditions from August 2023 but does not contend that similar Terms and Conditions were in place when Hopkins opened his account in February 2023 or that he received notice of any updated Terms and Conditions. ECF No. 1-5 ¶¶ 15-16; *see* ECF No. 15-2 at 7-8. While there is certainly no requirement that Bull Gaming prove up its claim in order to obtain information through its § 1782 application, the Court is concerned that Bull Gaming's unwillingness or inability to show the existence of an enforceable contract—despite being aware of this deficiency and claiming it has the evidence remedy it—is indicative that no such contract exists and the contemplated Curaçao action is pretextual. ECF No. 37 at 7-8; *see* *Takagi*, 2023 WL 1442893, at *6 ("While nothing prevents the Court from considering whether a section 1782 application describes a plausible claim for relief…or otherwise reflects 'good cause' for discovery, the Court is reluctant to endorse a standard for exercising discretion that does not

Bull Gaming's lawyers even admitted they might use Hopkins's personal data for "potential actions against unknown individuals or businesses"—people who have nothing to do with him. The court called that idea "highly speculative" because there was no real case lined up or deadline looming. What it really shows is that Rollbit collects more information than they need, and they haven't been clear about how or why they might use it. For players, that's unsettling: it means your personal details could end up in legal—or even unrelated—adventures you never signed up for.

United States District Court
Northern District of California

other "potential actions against unknown individuals[.]" ECF Nos. 17-3 ¶ 4; 18 at 12-13. But the purpose of § 1782 is to provide litigants with a vehicle to gather discovery for foreign lawsuits that are "within reasonable contemplation[,]" not ones that are "merely speculative." *Intel*, 542 U.S. at 259; *Mangouras,* 980 F.3d 88. Bull Gaming's claims against "unknown individuals or businesses" for unspecified violations of the Terms and Conditions are highly speculative. ECF No. 17-3 ¶ 4. That Bull Gaming admits that the § 1782 application has a dual purpose—to obtain discovery for use in the action against Hopkins *and* to obtain information for unspecified "potential actions"—suggests that its application may be brought for improper reasons. ECF No. 18 at 13; *see In re Premises Located at 840 140th Ave.*, 634 F.3d at 563 ("the district court should deny the request if the district court suspects that the request is a fishing expedition").

Also worthy of mention is the fact that Rollbit is the same brain behind the former gambling site EZRage, which was shut down with numerous user scams and withdrawal-blocking complaints. EZRage was run by Pengwins N.V, which also founded Rollbit, but due to the numerous allegations made, they rebranded to Bull Gaming N.V, and the pattern didn't change, as there are still a lot of complaints from customers on Rollbit withholding their funds.

> Curacao-based Bull Gaming N.V. owns and operates RollBit. In the past, Pengwins N.V. was listed as this site's operator. That company is the same as the entity behind the former CS: GO gambling site EZRage, which got hit with scam allegations. RollBit used to be one as well. It first launched in early 2020 and received a makeover in March of 2021 when its 2.0 version went live. It now features seven provably fair games, a robust catalog of thousands of slots, and many live tables.

Shilling and Selling: Investigating Gainzy's Alleged Rollbit Coin Manipulation

Gainzy222, a prominent crypto influencer with over 280K followers on X (formerly Twitter), has been central to controversies surrounding Rollbit's marketing practices and alleged market manipulation. His partnership with the platform, which began in early 2023, has raised significant ethical and regulatory concerns, particularly regarding undisclosed financial incentives, coordinated token dumping, and deceptive promotional tactics.

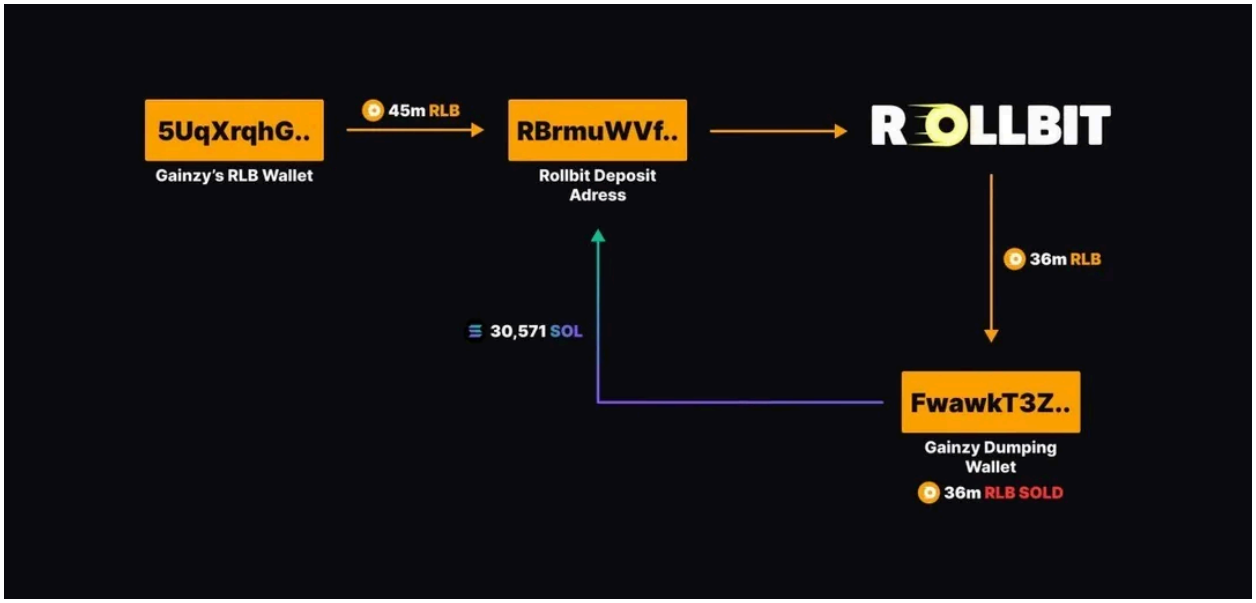

Shilling RLB Without Disclosure: Between March and April 2023 , Gainzy tweeted about RLB 47 times, calling it "the most undervalued gem in crypto" and predicting a "10x surge." Blockchain data shows hesold **45 million RLB tokens** (worth ~$3 million at peak prices) during this period, often within hours of his promotional posts

Deleted tweets

Mixer Wallet Activity: To obscure his selling activity, Gainzy usedRollbit's wallets as intermediaries. He deposited RLB from his publicSolanaaddress (5Uqx) into Rollbit'scold wallet (RBrmu), then withdrewtokens to a new address(Fwawk)for offloading. This method allowed him to avoid direct on-chainlinksbetween his promotional tweets and sales.

Allegations of Market Manipulation (Pump and Dump) of Rollbit Coin (RLB) by "Gainzy"

Core Allegation:

- "Gainzy" is accused of selling approximately 45 million RLB coins (reportedly worth $3 million USD at its All-Time High) over a two-week Period.

- This selling allegedly occurred while Gainzy was actively promoting ("shilling") RLB on social media as an "underpriced investment."

- Alleged coordination between him and the Rollbit team, specifically regarding the provision of in-house funds for his gambling. Notably, when Gainzy was promoting RLB, his "bets" were often upwards of $100K. However, since switching to Stake, his betting amounts have noticeably decreased to around $5K–$10K.

Alleged Method:
Alleged Market Manipulation by GainzyPromotion (Shilling): Gainzy publicly tweeted about purchasingRLB, frequently presenting it as undervalued to his audience.

.

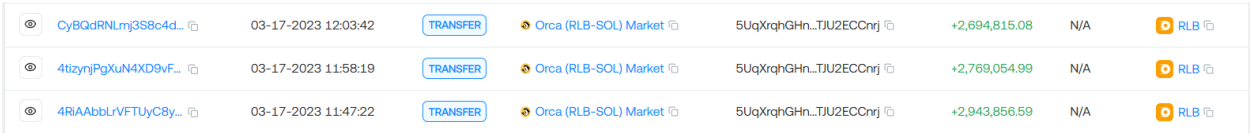

1. **Dumping:** Shortly after these promotional tweets—sometimes within mere hours—Gainzy allegedly sold significant amounts of RLB.

2. **Obfuscation via Rollbit Platform:** Gainzy reportedly used theRollbit platform itself as a mixer to obscure the origin of funds:
    - Deposited the purchased RLB into his personal Rollbitaccount.
    - Withdrew the RLB to a different wallet before initiating sales.
    - This process allegedly involved Rollbit's cold wallets,potentially masking the trail and origin of the RLB being sold.

Key Wallet Addresses & Transaction Flow:

Buying Wallet (5Uqx): 5UqXrqhGHnu6CkUArmqvT8rQsAtLo7c8V9TJU2ECCnrj

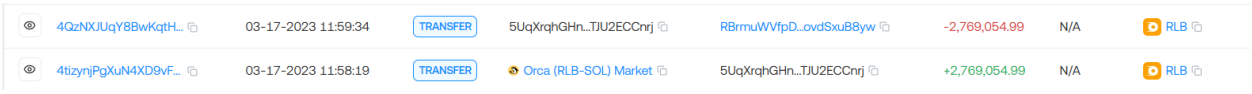

- This Solana address was allegedly used by Gainzy to purchase RLB.
- Evidence cited: Gainzy's public tweets announcing RLBpurchases (e.g., $400k on 3/17, $200k on 3/08) correspond withRLB inflows to this address.

Selling Wallet (Fwawk): FwawkT3Zuzh94pBXR2aNognqPxUM3qgj4hHQ8394d9iH

- RLB was allegedly withdrawn from Gainzy's Rollbit account to this address.
- This address was then used to "market sell" or dump the RLB coins.
- Evidence cited: Significant RLB sales occurred from this wallet, including on 3/17, the same day Gainzy tweeted about a large ($400k) purchase.

Evidence Linking Fwawk (Selling Wallet) to Gainzy

- Gainzy allegedly sent Solana (SOL) from the selling wallet (`Fwawk`) _to_ his unique Rollbit deposit address (`RBrmu`).
- Multiple transactions (at least 9 cited) totaling 30,000 SOL were reportedly sent this way (e.g., $200k worth of SOL on 3/18).
- Argument: Only Gainzy would know and use his specific `RBrmu` deposit address, thus proving his control over the `Fwawk` selling wallet.

Alleged Coordination with Rollbit Team:

- The text suggests potential coordination between Gainzy and the Rollbit team.
- Evidence cited: All Solana (SOL) received from the RLB sales (via Fwawk) was allegedly instantly sent back to Rollbit's main deposit wallet.
- Context: Gainzy reportedly took a paid sponsorship from Rollbit in January and consistently promoted the platform and its coin using his referral link.

Rollbit and $RLB: A Deep Dive into Transparency, Token Migration, and Market Concerns

When a project lacks transparency, it often indicates deeper operational and managerial issues—especially in the world of cryptocurrency. Rollbit is a gambling platform that launched its token, **$RLB**, on **November 10, 2021**, originally on the **Solana blockchain**.

- **Solana Contract Address**: RLBxxFkseAZ4RgJH3Sqn8jXxhmGoz9jWxDNJMh8pL7a
- **Initial Total Supply**: 5 Billion $RLB

Tokenomics (Initially Shared):

- **22.865%** allocated to airdrops
- **77.135%** reserved for stakers

Multiple airdrops were carried out, including distributions to active Solana addresses. Their [whitepaper](), released on **November 26, 2021**, outlined why they chose Solana: primarily for low fees and fast transaction speeds compared to other Layer 1s like Ethereum and Bitcoin.

The RLB token will live on the Solana chain, since it is more cost effective because of the current state of the Ethereum gas market. The major benefit of choosing Solana is that simple value transfers are very cheap and a lot faster compared to other Layer 1 blockchains (see the table below).

RLB Lottery

On **November 25, 2021**, Rollbit introduced the **RLB Lottery**, where users could stake RLB for a chance to win large prize pools. A 0.1% staking fee was charged per entry, with **50% of that burned** each round.
By **June 25, 2023**, **over 1.77 billion RLB** had been burned across four transactions.

Migration to Ethereum

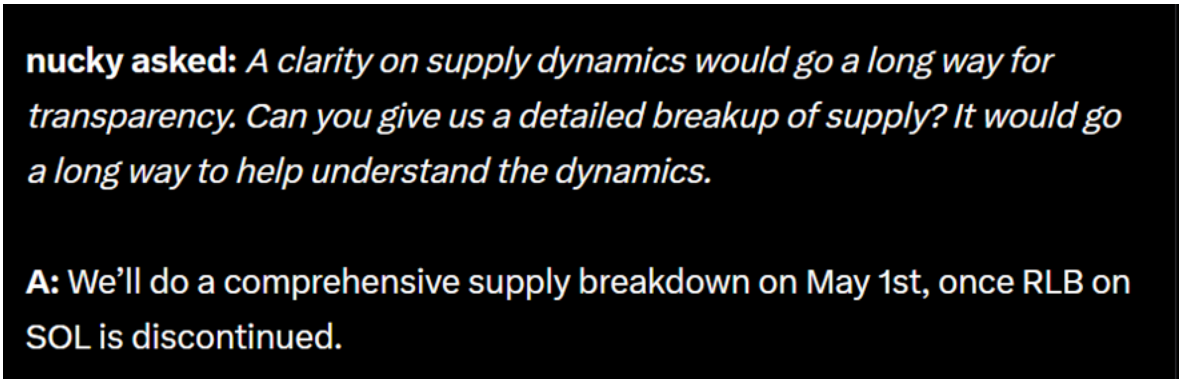

By **June 28, 2023**, Rollbit migrated $RLB to the **Ethereum blockchain**. Users were instructed to deposit their Solana $RLB to the platform and withdraw an equivalent amount on Ethereum. The deadline for migration was **May 1, 2024**. Any $RLB left on Solana after that would be considered void.

This decision raised major concerns—**why move from Solana, known for low fees, to Ethereum**, which has high gas fees and scalability challenges?

- **Ethereum Contract Address**: 0x046eee2cc3188071c02bfc1745a6b17c656e3f3d
- **Deployer Wallet**: 0x772D8d6e4A4a5251d7a174e3F60E3F954B386aF0
- **Ethereum Total Supply**: 5 Billion $RLB

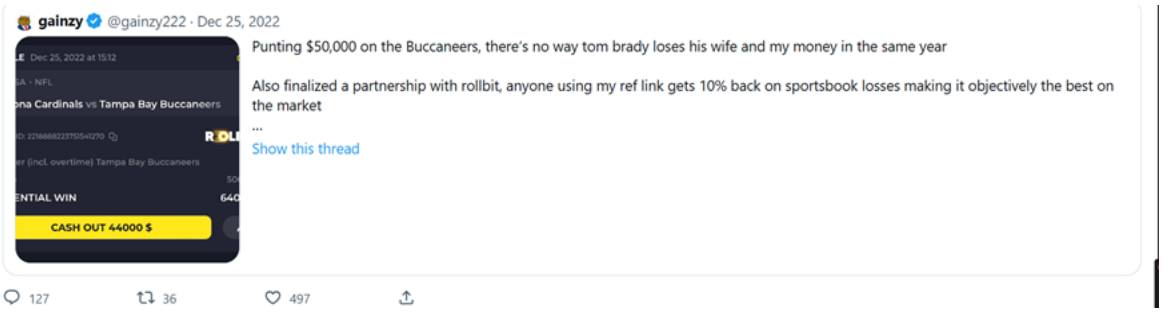

Despite the new token launch, **no updated tokenomics were shared**.

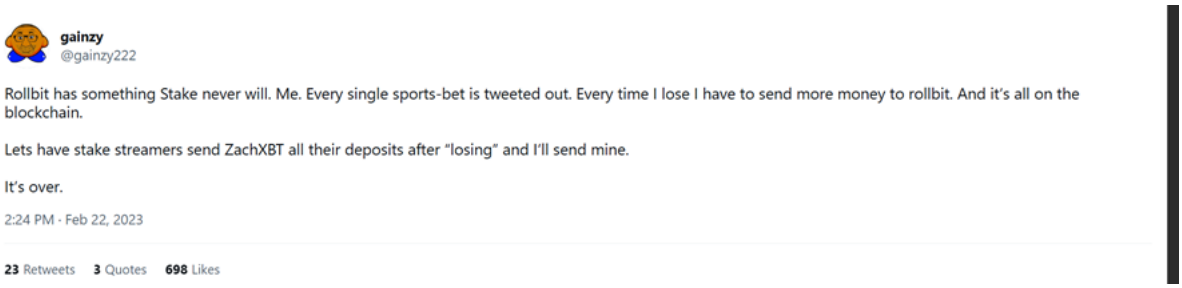

On **March 20, 2024**, co-founder **@Razer_Rollbit** posted an article on X (formerly Twitter) answering community questions and concerns, promising a full supply breakdown on **May 1, 2024** once Solana support was discontinued. **As of now, no such breakdown has been provided—raising serious red flags.**

Influencer Promotion & Dump Allegations

In **December 2022**, influencer **@gainzy222** partnered with Rollbit, promoting both the platform and $RLB. This coincided with the rise of [the **GambleFi narrative**](#)—gambling-related tokens gaining popularity.

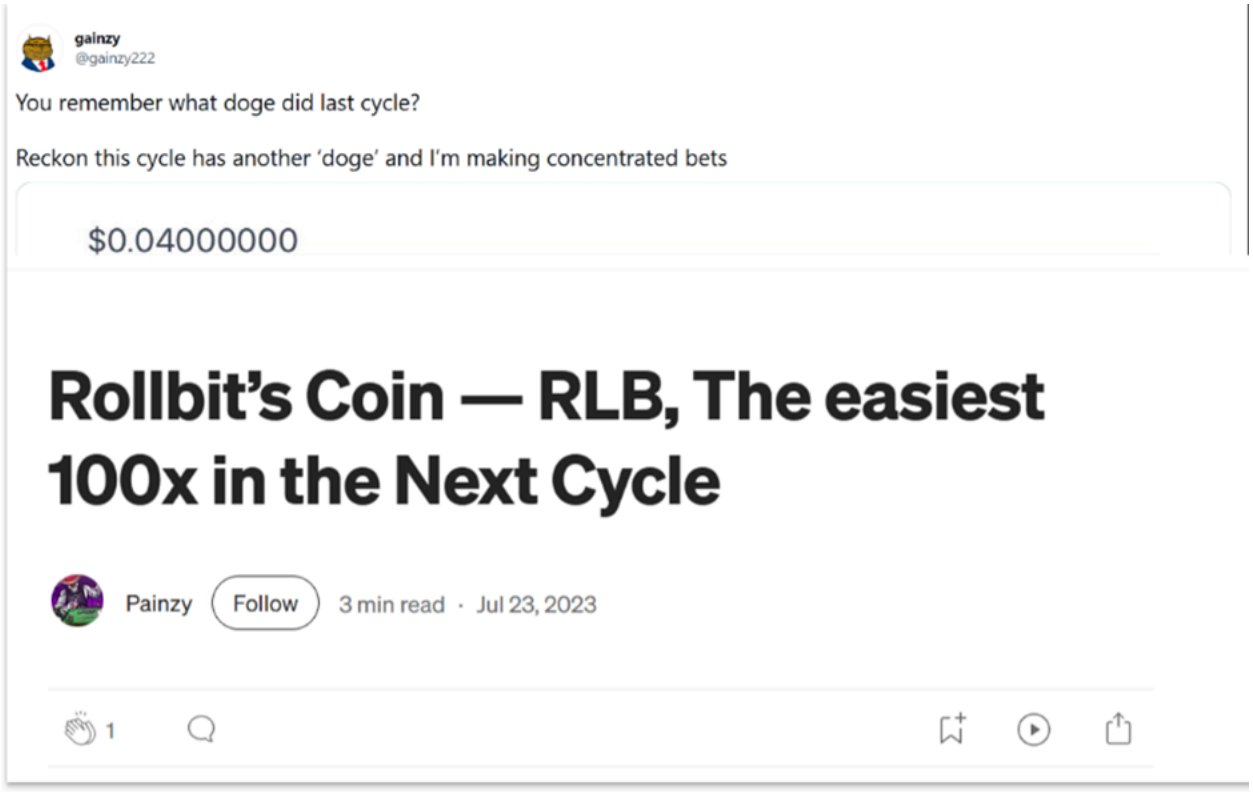

However, on **April 1, 2023**, Ct influencer **@Gr1zzlyTrades** accused Gainzy of **dumping 45 million $RLB (~$3M at ATH)** while continuing to promote it on X. The thread has since been deleted but is archived via [Wayback Machine](#).

Gainzy's alleged pattern:

1. Buy $RLB on-chain
2. Deposit to Rollbit
3. Post hype tweets
4. Withdraw to new wallet
5. Sell

These repeated actions contributed to panic selling and raised concerns about market manipulation. There were also claims that Rollbit paid several influencers (KOLs) to promote $RLB. A massive campaign is underway promoting $RLB across blogs, Twitter, YouTube, and even a Dune dashboard that appears to be a paid promotion. These materials are calling $RLB "the next Doge," claiming it will 100x soon, and using the token burn as a key reason for a potential price surge.

Notably, on **Feb 7, 2023**, a previously inactive wallet tied to Gainzy received **2,571 $SOL** from Rollbit's treasury, then used it to buy $RLB—raising further suspicions about potential promotional deals.

Gainzy wallet addresses:

FwawkT3Zuzh94pBXR2aNognqPxUM3qgj4hHQ8394d9iH

CztrSSFVrtR3ad6Qsg6VjHUCMeLztKLkhBDsTZTqHFUe

5UqXrqhGHnu6CkUArmqvT8rQsAtLo7c8V9TJU2ECCnrj

RBrmuWVfpD7tVBVmfusrmA624wVCWa1F2ovdSxuB8yw

Could this be the reason why they migrated to solana?

Degen Exchange & Legal Gray Areas

In **August 2023**, Rollbit launched **Degen Exchange**, allowing users to buy/sell tokens like $BTC, $OX, $Unitbot, and $RLB. However, **the operation was unlicensed** and **shut down within a month**, citing low adoption and regulatory uncertainty.

Why launch an unlicensed exchange in the first place?

Did they use it for laundering of RLB?

Ethereum $RLB and Lack of Transparency

With no new tokenomics or roadmap, **transparency remains a core issue**. After the Ethereum launch, burning became automated via **Rollbot**, funded by daily revenues from Rollbit's Casino, Crypto Futures, and Sportsbook products.

On **June 28, 2023**, **1.2M $RLB** was sent to a Rollbit.eth, then sent to Rollbot deposit address and then moved to the Rollbit ERC20 hot wallet—**obviously it is an insider wallet or team wallet**

Link to transaction

From January to November 2024:

- **Burned**: 895,790,342 $RLB
- **Sent to Hot Wallet**: 895,678,991 $RLB

To hot wallet:
https://etherscan.io/token/0x046eee2cc3188071c02bfc1745a6b17c656e3f3d?a=0x772d8d6e4a4a5251d7a174e3f60e3f954b386af0

Burned:
https://etherscan.io/token/0x046eee2cc3188071c02bfc1745a6b17c656e3f3d?a=0x0000000000000000000000000000000000000000

The amount sent to hot wallet is like what have been burnt so meaning a sell off is equivalent to the burned, there is nothing like demand will high since

Circulating Supply Issues

The team claims that **100% of $RLB is in circulation**, but this is misleading.

- **Deployer Wallet**: 1.1B (22% of total supply)
- **Rollbit Hot Wallet + Rollbot**: 161M (3.2% of total supply)
- **Total burned**: 2.9B (57% of total supply)
- **Actual circulating supply**: ~2.1B, but **59.6% of that is controlled by Rollbit**

Only ~1.2% of supply is in the Uniswap RLB/USDC pool, making the token **extremely illiquid**. For example, selling $500K of RLB would cause **~13% price slippage**, despite its $137M market cap.

Migration Transparency Concerns

Rollbit asked users to deposit their Solana-based RLB for Ethereum withdrawals. However, **no clear data was provided on how many tokens were migrated**.

Between June and November 2023, Rollbit sent **347M RLB** to its hot wallet, allegedly for user withdrawals. But if all migration ended on May 1, 2023, why continue sending funds months later?

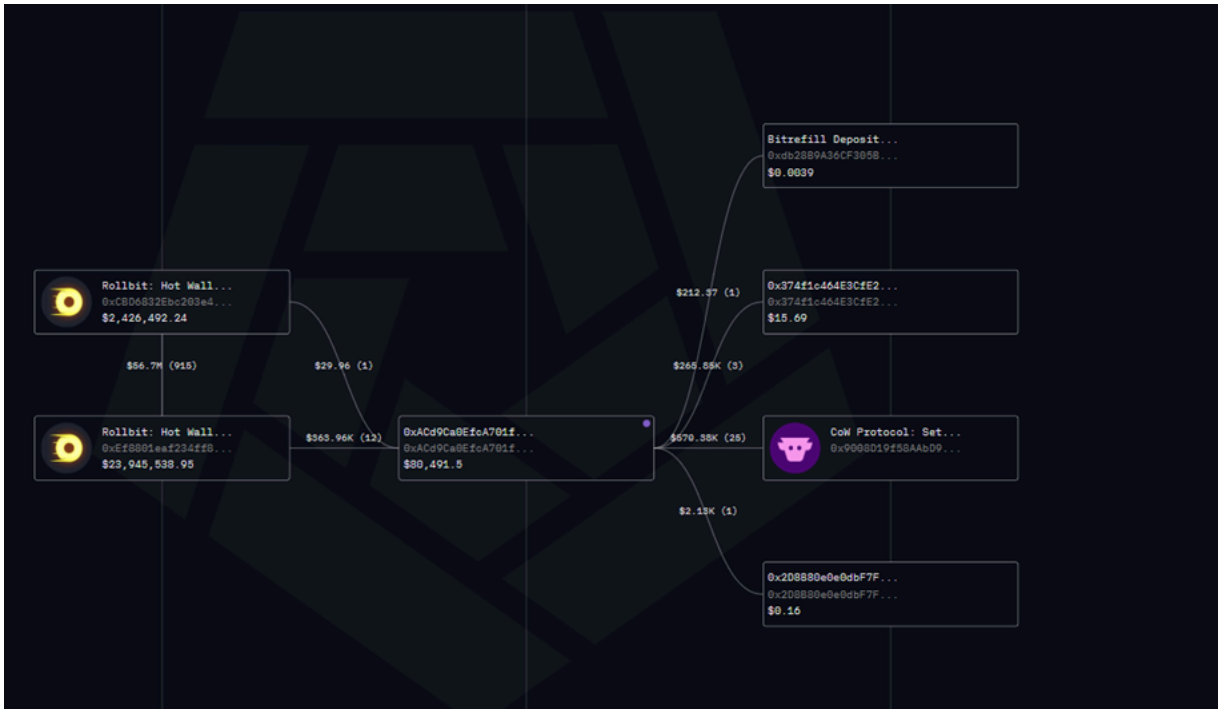

There's no transparency on:

- How many tokens were migrated
- How many remain in reserve
- What portion belongs to the team (even though the team said, they have zero allocation)

Does the Rollbit migrated to Ethereum just to have control over the token?

Suspicious Wallet Activity

On **March 19, 2025**, a new wallet funded with 0.01 ETH by the Rollbit hot wallet started receiving large amounts of $RLB. From **March 15 onward**, this wallet received **over 4M $RLB**, which are always **swapped for USD**T and some are used to buy Shuffle (SHFL) and deposited to **Shuffle** suggesting **possible internal distribution or wash trading**.

Wallet: 0xACd9Ca0EfcA701ffb749E443C5E5aBB1E75a6910

Final Thoughts

Despite the massive burn numbers and marketing campaigns, **$RLB still lacks**:

- A clear **tokenomics breakdown**
- A **roadmap**
- Any form of **transparency**

The decision to migrate to Ethereum, hold more than half the supply, use influencers, and conduct wallet activity without explanation makes the project appear **highly centralized and potentially manipulated**.

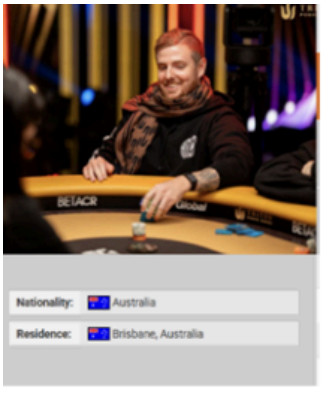

High Stakes and Legal Loopholes: Uncovering Rollbit's Alleged $70 Million Fraud

#1

Rollbit is attempting to execute a $70 million fraud in broad daylight by taking a winning player to court for $50 million right after freezing $20 million of his wins (1/8)

#2

In February 2023, Bull Gaming contacted Hopkins and offered him a $1,310 bonus for opening an account on the Rollbit platform. ECF No. 15-4 (Hopkins Decl.) ¶ 4. Hopkins, who attests to being a "known poker player" who has "participated in several professional tournaments," agreed, opening an account with Rollbit on February 16, 2023 under the name "Stake Stinks[.]" *Id.* ¶¶ 6, 8. He attests that Rollbit instructed him to "simply….create a Rollbit account with the email address you've received this email on" and did not require him to submit any KYC information beyond his email address. *Id.* ¶¶ 4, 7. Between February 2023 and April 2024, Hopkins "accumulated approximately $70,000,000 of winnings[.]" *Id.* ¶ 19. Rollbit paid him approximately $50,000,000, but, Hopkins attests, "has not yet" paid the remaining

In February 2023, Rollbit lured an Australian poker player, James Hopkins, to join the site with a $1310 bonus:

- Violating the Curacao license, allowing a player from Australia
- Broke a number of international KYC laws, foregoing any identity checks
- Subject to AML sanctions given the size of transactions (2/8)

Bull Gaming Loses Bid to Access Kraken Records for Curaçao Lawsuit

News | March 17, 2025
By: BlockTribune Staff Reporter

On Tuesday, March 11, 2025, the United States District Court for the Northern District of California denied a legal request from Bull Gaming N.V., a company based in Curaçao that operates the online gambling platform Rollbit.com. The firm had sought court approval under 28 U.S. Code § 1782 to obtain discovery materials from Payward, Inc., a San Francisco-based cryptocurrency exchange known as Kraken. Bull Gaming intended to use the information in a planned lawsuit against James Hopkins in Curaçao, but the court rejected the application, leaving the door open for a future filing.

Bull Gaming's request stemmed from a dispute with Hopkins, a self-described professional poker player who opened an account on Rollbit in February 2023 under the username "Stake Stinks." The company alleges Hopkins violated its terms by gambling on behalf of others or as part of a hidden group, prompting it to freeze his account in April 2024. Hopkins, who claims to have won approximately $70 million dollars on the platform, says Bull Gaming paid him $50 million but withheld over $19.6 million in remaining winnings. He asserts the company never required detailed identity verification beyond an email address when he signed up, following a $1,310 bonus offer.

The discovery application targeted records tied to cryptocurrency transfers Hopkins made in March 2024 from one of his wallets to two Kraken-managed wallets, identified as Kraken Bridge 1 and Kraken 7. These transactions included four separate transfers ranging from $100 to $2.6 million, totaling over $7.5 million. Bull Gaming sought detailed personal and financial data about the owner of Kraken Bridge 1, including names, addresses, transaction histories, and identification documents like passports or driver's licenses. Kraken, while not opposing the request, agreed to provide some of the requested information after discussions with Bull Gaming.

After winning close to $70 million, Rollbit paid out $50 million, froze the rest and followed up with a lawsuit to take back the $50 million they had already paid. (3/8)

United States District Court
Northern District of California

defendant." ECF No. 36-3 at 8. Despite having ample opportunities to demonstrate that Hopkins entered into a contract with Bull Gaming, Bull Gaming has not credibly done so. While Victoria Brown attests that new users are required to check a box confirming that they read and accepted Bull Gaming's Terms and Conditions, her declaration and the attached exhibit show that this procedure was in place in September 2024, after Hopkins first opened his account in February 2023. ECF No. 37-2 ¶ 6. This evidence is of limited probative value in showing that a similar procedure existing in February 2023 when Hopkins first opened his account. Similarly, Bull Gaming provided a copy of its Terms and Conditions from August 2023 but does not contend that similar Terms and Conditions were in place when Hopkins opened his account in February 2023 or that he received notice of any updated Terms and Conditions. ECF No. 1-5 ¶¶ 15-16; *see* ECF No. 15-2 at 7-8. While there is certainly no requirement that Bull Gaming prove up its claim in order to obtain information through its § 1782 application, the Court is concerned that Bull Gaming's unwillingness or inability to show the existence of an enforceable contract—despite being aware of this deficiency and claiming it has the evidence remedy it—is indicative that no such contract exists and the contemplated Curaçao action is pretextual. ECF No. 37 at 7-8; *see* *Takagi*, 2023 WL 1442893, at *6 ("While nothing prevents the Court from considering whether a section 1782 application describes a plausible claim for relief…or otherwise reflects 'good cause' for discovery, the Court is reluctant to endorse a standard for exercising discretion that does not

#4

When James Hopkins signed up in February 2023, there's no record he ever saw—or clicked to accept—Rollbit's Terms & Conditions. In fact, Rollbit's paperwork shows they didn't even start requiring new users to agree to those rules until September 2024.

They later tried to say "Well, here's our August 2023 policy!"—but that document didn't exist when Hopkins joined, and he never got told about it. In short, Rollbit can't point to any moment in early 2023 when Hopkins knowingly agreed to their contract, so the whole foundation of "you accepted our rules" simply falls apart, and they were trying to postdate his creation of the account. (4/8)

#5

Lastly, Bull Gaming may improperly be using the § 1782 application as a "fishing expedition" to gather information to determine whether it will bring claims against individuals other than Hopkins. ECF No. 36 at 18. As Bull Gaming acknowledges, it "intends to bring claims against unknown individuals or businesses regarding activities that violated Rollbit's Terms and Conditions and the law" and the "information Kraken holds" may be relevant to these other "potential actions against unknown individuals[.]" ECF Nos. 17-3 ¶ 4; 18 at 12-13. But the purpose of § 1782 is to provide litigants with a vehicle to gather discovery for foreign lawsuits that are "within reasonable contemplation[,]" not ones that are "merely speculative." *Intel*, 542 U.S. at

In March 2025, a U.S. court rejected Rollbit's attempt to subpoena private data from Kraken in their legal fight with Hopkins. They didn't just want information on Hopkins but also detailed personal and financial info on an unrelated third party. The court found this request way too intrusive and pointed out that Rollbit's case seemed more like a fishing expedition with no real proof to back it up (5/8)

#6

> other "potential actions against unknown individuals[.]" ECF Nos. 17-3 ¶ 4; 18 at 12-13. But the purpose of § 1782 is to provide litigants with a vehicle to gather discovery for foreign lawsuits that are "within reasonable contemplation[,]" not ones that are "merely speculative." *Intel*, 542 U.S. at 259; *Mangouras*, 980 F.3d 88. Bull Gaming's claims against "unknown individuals or businesses" for unspecified violations of the Terms and Conditions are highly speculative. ECF No. 17-3 ¶ 4. That Bull Gaming admits that the § 1782 application has a dual purpose—to obtain discovery for use in the action against Hopkins *and* to obtain information for unspecified "potential actions"—suggests that its application may be brought for improper reasons. ECF No. 18 at 13; *see In re Premises Located at 840 140th Ave.*, 634 F.3d at 563 ("the district court should deny the request if the district court suspects that the request is a fishing expedition").

Trying to leverage their legal and financial resources, Rollbit admitted they might use Hopkins's personal data for "potential actions against unknown individuals". "Fishing" for reasons to not pay out the bets.

Given their start with CSGO Diamonds, not surprising. (6/8)

#7

And Rollbit isn’t the only one using these fraudulent tricks to scam their users.

We’ve already exposed CSGORoll for mass-banning users who reached high bonus levels in their Ponzi-style reward system which is an unsustainable setup that encourages nonstop wagering with the promise of high returns. But the moment a user slows down or tries to claim too much, their account gets banned.

With no license or oversight, victims have nowhere to turn. (7/8)

#8

This case reveals how fraudulent online casinos like Rollbit/CSGORoll operate:

-Take deposits from restricted users

-Enforce rules only when it benefits the house

-Claim retroactive agreements

-Hold onto your data “just in case” (8/8)

ALEX WICE PUMP and DUMP Scheme

Meet Alex Wice — high-stakes crypto trader turned Rollbit evangelist. As an official partner of the infamous crypto casino, he's not just trading coins; he's rolling the dice with a “top-tier” referral code that kicks back 10% of his cut to followers — all while claiming it's the best deal Rollbit has to offer.

Wice's alliance with Rollbit went public on July 18, 2023, when he fired off a tweet sealing the partnership — a digital handshake that marked the beginning of a very strategic campaign.

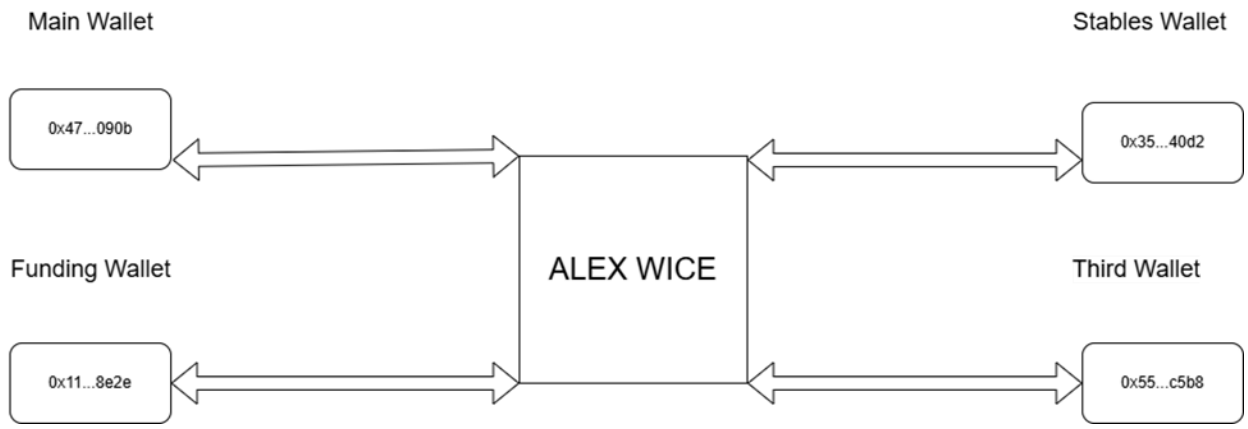

After that, the tweets didn't stop. One after another, he hyped up Rollbit — talking about features, tokens, and opportunities. On the outside, it looked like your typical influencer hustle. On the inside? Something felt off.

https://x.com/AWice/status/1682453155739746305

https://x.com/AWice/status/1682191585289846785

https://x.com/AWice/status/1682814083069022208

Now here's where it gets interesting. Behind all the public noise, four wallets — all connected to Alex — were moving serious money around. The final destination? Yep, Rollbit.

The four main wallets involved in this Alex Wice Investigation are

0x11BaFF01074E3323f3B7dc9b1a76b73D415e8e2E; This is his funding wallet

0x47eaAC093f5D7F5348365Ee7521A1B0abBa0090b; This is his main wallet

0x557C8a6f0a1c042D917b3476B65c5d00b3DDc5b8; This is his third wallet

0x359fC4E06c2fcC902E6F1DBECEB86e07660940d2; This is his stable's wallet

Just five days before his Rollbit announcement, he quietly sent $200,000 USDC across his wallets.

Two days before the big partnership went live, Alex used one of those wallets to buy $200K worth of RLB tokens. Think about that: he's already holding a mountain of tokens before telling the public about the project. Not a great look.

0xdf173d61f6e...	Transfer	17799412	650 days ago	0x11BaFF01...D415e8e2E	OUT	0x47E145d7...601Ef090B	50.5	ERC-20: ETH (ETH)

Right after tweeting about Rollbit's jackpot system, Alex jumped in and bought more tokens. But just like before, the promo posts kept coming… and three days later,

He started buying 6 minutes later

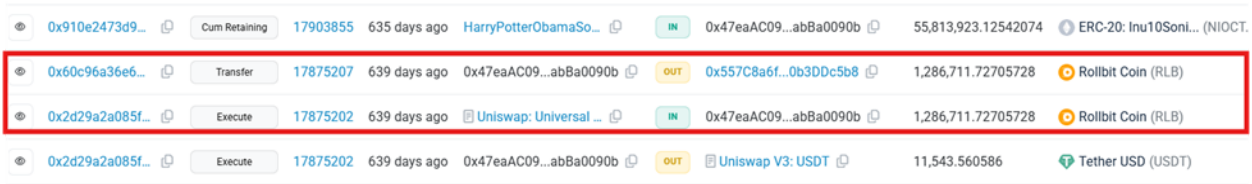

0x2bcdb548e7...	Execute	17826674	646 days ago	0x47eaAC09...abBa0090b	OUT	Uniswap V3: USDT 3	1,911.618997	Tether USD (USDT)

He was back to selling again. Wash, rinse, repeat.

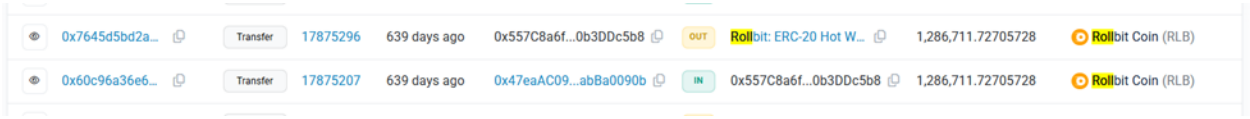

0x2bcdb548e7...	Execute	17826674	646 days ago	0x47eaAC09...abBa0090b	OUT	Uniswap V3: USDT 3	1,911.618997	Tether USD (USDT)

Here's the kicker: four days later, more RLB tokens were bought, shuffled around, and eventually sent right back to Rollbit's hot wallet. It's hard not to connect the dots. Especially when you remember Rollbit's history of doing this kind of thing with other influencers like Gainzy.

0x910e2473d9...	Cum Retaining	17903855	635 days ago	HarryPotterObamaSo...	IN	0x47eaAC09...abBa0090b	55,813,923.12542074	ERC-20: Inu10Soni... (NIOCT.

From the third wallet it was moved back to the Rollbit Hot Wallet

0x7645d5bd2a...	Transfer	17875296	639 days ago	0x557C8a6f...0b3DDc5b8	OUT	Rollbit: ERC-20 Hot W...	1,286,711.72705728	Rollbit Coin (RLB)
0x60c96a36e6...	Transfer	17875207	639 days ago	0x47eaAC09...abBa0090b	IN	0x557C8a6f...0b3DDc5b8	1,286,711.72705728	Rollbit Coin (RLB)

Put simply, this wasn't just Alex making savvy trades. It looks a lot like a coordinated pump-and-dump — with Rollbit possibly pulling the strings or at least playing along. The timing, the token movements, the rapid-fire dumps... it paints a pretty clear picture. And once again, the average crypto user is left holding the bag.

🧨 Rollbit's RLB Dump on Solana: A Timeline of Deception

- **Deployer Address:** `RLB7VtCq4GkZrjkkQguvwPz32njCA13LDkjNxeAGKXH`
- **RLB (SOL) Deposit Address:** `AAbcWqh1WGQkVaK6GrMae1dVGcriwCxPh8PrW69vAEp4`
- **Airdrop Wallet:** `6rF9LXCRMmymgxcprDFkPjp2cc5wb1CuAPJuwFbtp6pF`
- **Liquidity Wallet:** `HPpNsQt8ZhVszMQ2ZFjSWy3kyfSPtwDs7spTdHTuqoad`
- **Dump Wallet:** `5E2eFQzhXqSwdcoxiW2XZh6gA9PcMjEZAP3zrbzWKxnr`

🧾 What Happened?

- On **November 23, 2021**, **5 billion RLB tokens** were minted by the deployer on Solana, across 5 transactions.
- Of this:
    - **9M RLB** went to the **airdrop wallet** (later distributed).
    - **4.8B RLB** was sent to the **Rollbit treasury**, a so-called "circulating supply." But 96.4% of that was moved to a **centralized hot wallet** — highly misleading.
    - **9M RLB and 100 SOL** were sent from the treasury to the **liquidity wallet**, used to provide liquidity on **Raydium**.
- **November 26, 2021: 50M RLB** was quietly sent to the **dump wallet** — unexplained at the time.

💸 Liquidity Exit & Token Dumping

- **November 17, 2022:** The liquidity wallet removed **3M RLB** and **7,661 USDT** from the pool.

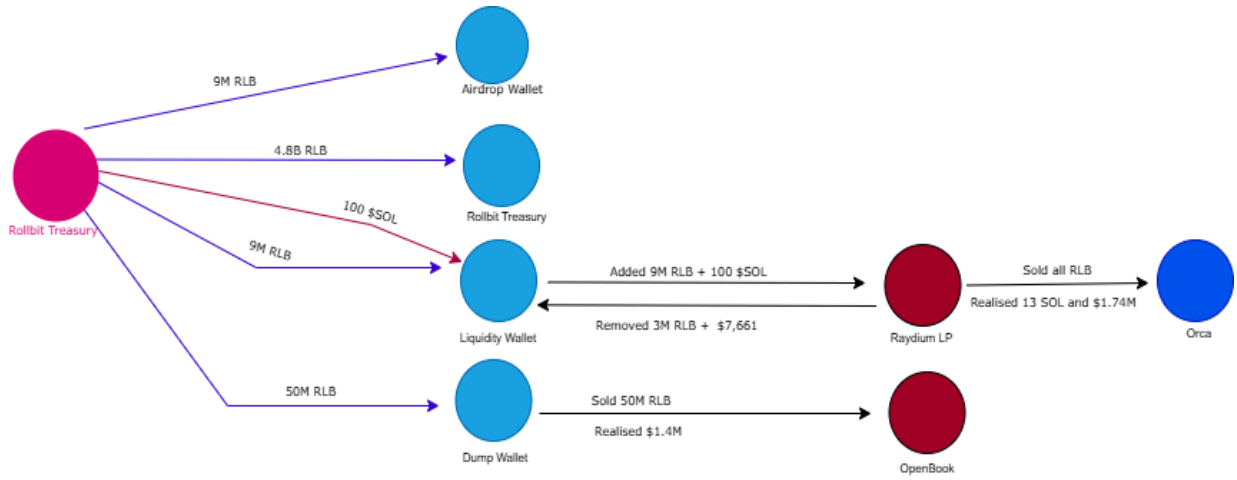

- By **August 8, 2023**, that same wallet began dumping RLB on **Orca**, cashing out **13 SOL** and **1.74M USDC**.

- The **dump wallet** remained dormant until **January 2023**, when both the **deployer** and **RLB-SOL deposit wallet** sent **0.1 SOL and 1.51 SOL** to activate it.

    - The wallet used **OpenBook (CLOB)** to start dumping the 50M RLB.

    - By **February 16, 2023**, it had fully sold the tokens for **$1.43M USDT**, later converting **$300K** into **13,000 SOL**.

- This wallet was funded for gas fees by **the same deposit wallet used to receive user deposits**. Without this link, Rollbit could've falsely claimed it was a user wallet. But this subtle connection ties everything back to the team.

🔥 The "Burn" Cover-Up

- On **May 1, 2024**, the **deployer** sent the remaining **100M RLB** to the **RLB SOL deposit address** for a burn.

- Rollbit claims full circulating supply but conveniently burnt:

    - **1.7B RLB** by **June 25, 2023**

    - **3.1B RLB** in **November 2023** and **May 2024**

> That’s **4.8B RLB** burned — 96% of the supply.
> If the tokens were truly in circulation, **did every holder return their RLB for burning?**
> Highly doubtful.

In reality, these burns came from **Rollbit's own treasury**, revealing they **held the majority of the supply all along**.

🚨 Migration to Ethereum: A Clean Slate or an Escape?

In **June 2023**, after dumping on the community and orchestrating major sell-offs, the team **migrated RLB to Ethereum**. This move came only after extracting millions in profits, and burning the leftover tokens for optics.

❗ Final Thoughts

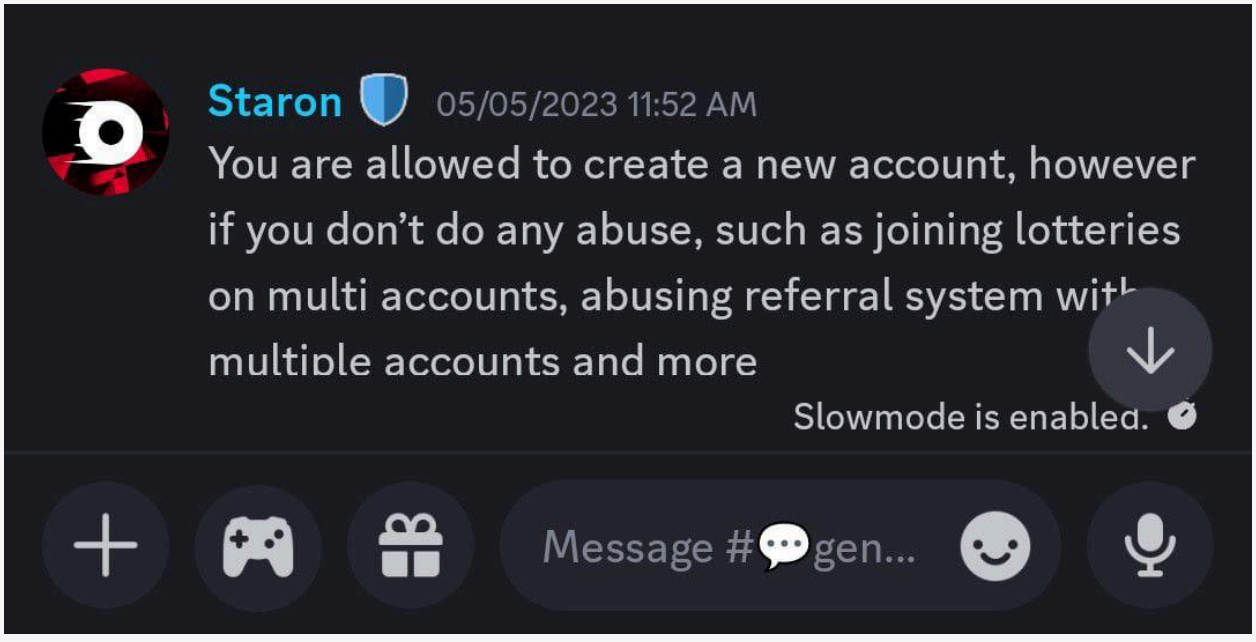

What Rollbit did wasn't just bad tokenomics — it reeks of:

- **Market manipulation**
- **Centralized deception**
- **False claims of decentralization**
- **Dumping on their community**

Despite trying to rebrand through migration and burns, the wallets and data tell a different story.

KYC Concerns at Rollbit:

On **May 5, 2023**, a **Rollbit community moderator** openly admitted on **Discord** that users are allowed to **create multiple accounts** — raising serious concerns about the platform’s **KYC (Know Your Customer)** standards.

Even major centralized exchanges like **Bybit**, which offer a "sub-account" or account-switching feature, **require full identity verification** and **ownership transfer** before accessing features. Once transferred, the old account becomes unverified and unusable.

But **Rollbit's policy** seems dangerously lax. According to their moderator, users can **freely create and use multiple accounts** without any meaningful verification restrictions.
